

## EIZO to Meet Its CO<sub>2</sub> Emissions Reduction Goal 9 Years Ahead of Schedule

**Hakusan, Japan, December 22, 2020** – EIZO Corporation (TSE: 6737) today announced that it will meet its CO<sub>2</sub> emissions reduction goal as early as fiscal year 2021. The goal, which was established in fiscal year 2018 and originally set to be achieved by fiscal year 2030, is on course to be met 9 years earlier than expected. This was achieved as a result of EIZO using green electricity at its main manufacturing facilities in Japan.

EIZO's corporate philosophy is "Through the pursuit of imaging solutions with advanced technologies, we enrich people in their professional and personal lives." The EIZO Group Code of Conduct is being regarded as EIZO's Corporate Social Responsibility (CSR) policy to achieve this goal. EIZO has incorporated the Environmental Consideration Category in its mid-term CSR goals to reflect the importance that EIZO regards environmental efforts.

### EIZO Mid-Term CSR Goals

Category	Mid-Term Goals
Environmental Consideration	Accelerate the pace of reducing environmental impact <ul style="list-style-type: none"> <li>● Products: Industry-leading environmentally responsible development</li> <li>● <u>Operations: By fiscal year 2030, reduce CO<sub>2</sub> emissions by 50% compared to fiscal year 2017</u></li> </ul>
Society (Stakeholders)	Promote CSR in a concerted effort throughout the supply chain Create a working environment that enables everyone to work with vigor
Business Model	Contribute to society based on new values created through Imaging Chain Innovation

In April 2020, EIZO converted 10% of the electricity usage at its main manufacturing sites, approximately 9.21 million kWh, to green electricity, making it one of the more effective measures in meeting EIZO's CO<sub>2</sub> reduction target. Furthermore, EIZO raised its green electricity usage to 50% of its total consumption in October of the same year. This resulted in reduced annual CO<sub>2</sub> emission from its main manufacturing sites by approximately 3,100t-CO<sub>2</sub> (55% less than fiscal year 2017). These measures will allow EIZO to meet its target as early as fiscal year 2021.

EIZO group companies worldwide have also accelerated their adoption of green electricity. EIZO Technologies GmbH (Geretsried, Germany), dedicated to the development and production of solutions for air traffic control and industrial markets, addressed environmental efficiency with the relocation to a new factory which will run 100% on green electricity starting January 2021.

In response to the expectation of reaching its CO<sub>2</sub> emission reduction targets early, EIZO revised its goals to achieve Zero-CO<sub>2</sub> emission by fiscal year 2040. The entire EIZO group aims to further enhance its environmental efforts, and make substantial contributions to a prosperous and sustainable future society.

New Goals for CO<sub>2</sub> Emissions Reduction

Target Year	Goals
Fiscal Year 2030	Reduce CO <sub>2</sub> emissions by <b>70%</b> compared to fiscal year 2017
Fiscal Year 2040	Achieve Zero-CO <sub>2</sub>

Relevant SDGs

**About EIZO**

EIZO (TSE:6737), which means image in Japanese, is a visual technology company that develops and manufactures high-end visual solutions to enrich people in their professional and personal lives.
